DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 04/28/2010 has been entered.

Examiners Amendment

2. This application is in condition for allowance except for the presence of claims 3 – 20, 29 – 35 and 37 - 41 directed to nonelected without traverse. Accordingly, claims 3 – 20, 29 – 35 and 37 - 41 have been cancelled.

Allowable Subject Matter

3. Claims 1 and 2 are allowed.

4. The following is a statement of reasons for the indication of allowable subject matter:

The present invention of claims 1 and 2 is directed to a multimedia content containing moving pictures and audio is divided into multiple scenes and metadata is generated for each of the scenes obtained as a result of the division.

Independent claim 1 identifies the unique distinct feature "a thumbnail image generation unit for extracting a representative frame of each scene as a thumbnail image based on corresponding scene section information metadata sent from the scene division unit and generating thumbnail image information metadata describing

position of the thumbnail image in the multimedia content."

The closet prior art, Yamamoto (US 2002/0052864) discloses a scene division unit for dividing multimedia content containing at least one of moving pictures and audio into a plurality of scenes to generate scene section information metadata indicating a scene start position and a scene end position for each scene obtained as a result of the division (para 0139). Papagan et al (US 2002/0059604) discloses a scene description edit unit for performing hierarchical editing of each scene of the multimedia content based on the scene section information metadata sent from the scene division unit and generating scene structure information metadata describing a hierarchical structure of the multimedia content (para 0029). Hanamoto (US 2002/0019833) discloses a metadata description unit for integrating the scene section information metadata and the scene structure information metadata and generating metadata describing contents and a structure of the multimedia content in accordance with a predetermined format (figs 12A and B, para 0116 – 0120). However the combination of Yamamoto, Papagan et al and Hanamoto fails to anticipate or render the above mentioned underlined limitations obvious.

Hence claim 1 is allowed.

Since claim 2 is dependent on claim 1, therefore it is allowed.

Therefore claims 1 and 2 are allowed over prior art.
